DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-10 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the condition where the zoom ratio fw/ft to be satisfied, does not reasonably provide enablement for zoom ratio between 3.1 and 5.5. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make the invention commensurate in scope with these claims. The focal length of the zoom lens in the shortest focal length condition fw should always be less than or equal to the focal length of the zoom lens system in the longest focal length condition ft . This concept is well known and can be verified through examples 1-4 on pages 18-25 of the specification. Therefore the zoom ratio fw/ft should theoretically be less than or equal to 1.

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 2873

(a) Regarding claims 1 and 10, the focal length of the zoom lens in the shortest focal length condition f_w should always be less than or equal to the focal length of the zoom lens system in the longest focal length condition f_t . This concept is well known and can be verified through examples 1-4 on pages 18-25 of the specification. Therefore the zoom ratio f_w/f_t should theoretically be less than or equal to 1. It is unclear of the claimed condition where the zoom ratio f_w/f_t is between 3.1 and 5.5.

(b) Claims 2-9 are rejected based upon the rejected base claim 1.
